Styling & Design

Fashion design is the applied art dedicated to clothing and lifestyle accessories created within the cultural and social influences of a specific time. Here in SGG Tekstil, we believe that the time to apply this definition to the promotional textile market has come. Every production has been, is and will be a unique piece of special promotional-fashion design. And you will have a chance to take part in any new creation. SGG Tekstil, we believe now is the time to adopt this definition as be spoke textile producers.

Each and every production is unique and here is your chance to experience this.

Fabric & Colours

The first step is about choosing the right fabric for your item and, of course, match the colours of your logo. Thanks to the wide variety of fabrics available in the Turkish market and with the support of 'Pantone colours' reference, combinations are virtually endless.

CAD & Cutting

Once your special design has been created, all the data is entered into the CAD-system, a fully computerized system creating patterns for cutting the fabric. This allows us to make a fast production-like sample using our in-stock fabrics and, once you approve it, the plotter creates the drawings needed in the cutting department. Here we have semi-automatic machineries, to turn your designs into fabric ready to be decorated and sewn.

Printing

Screenprinting heat transfer printing, sublimaitlon system, digital printing, stone applications.. many ways to promote your logos. All theseprocesses dispose of the newest technologies (MHM machinenes for screenprinting for example), besides the inks used (RUTLAND for instance) are EcoTex certified.

Embroidery

As we well know that a state-of-art embroidery gives your logo major visibility, this is the aspect of production we most care about. Top-of-the-range machinenes are used, Tajima for "chines" stitches and Barudan for smaller details.

Sewing

Fully automatic machinery and careful human supervision limit mistakes to none, your design turns into reality.

Quality Control

The final step in order to assure the best Quality Service. Your production is subjected thorough to a thorough inspection by our expert staff and prepared prior to being sent to destination.
